

Halo vs Hidden Halo

We see the host with a halo behind him

Would you like to have a halo

The halo gets subtler

Or would you prefer a hidden halo?

We're talking about Diamond settings

Host in padmasana rotating in her chair

A Halo is a small ring of accent diamonds surrounding the main stone. These rings face parallel to the main stone and follow the exact circumference of the main diamond

so what's a hidden Halo?

pedestal up again

A hidden halo is also a small ring of accent diamonds surrounding the main diamond but except for facing parallel it faces perpendicular to the diamonds' face. It's called hidden because the diameter of this accent ring is less than that of the main stone. This ensures you cannot see the diamonds from the top. This means that you can only see the accent stones from the side.

Which one should you pick?

A Halo setting surrounds your main stone and makes it look bigger giving your regular solitaire a visual flair.

A Hidden Halo is subtler but because of the unique angle of the accent stones it catches light from all sides making your ring sparklier overall.

So pick what suits your needs
